Subject Index

Adhesion
  adhesion at elevated temperatures of TiN coatings on cemented carbides, 513
Alloys
  effects of microstructure on hardness and palmqvist fracture toughness of WC–Co alloys, 377
  kinetics of compositional modification of (W,Ti)C–WC–Co alloy surfaces, 225
  local impact damage and erosion mechanisms in WC–6wt.%Co alloys, 411
  titanium-carbonitride-based hard alloys for cutting tools, 401
Aluminium
  mechanical properties and wear resistance of a whisker-reinforced zirconia-toughened alumina, 105
  microcrack and transformation toughening of zirconia-containing alumina, 77
  mixed α- and β-(Si–Al–O–N) materials with yttria and neodymia additions, 161
  pressureless-sintered Al_2O_3–TiC composites, 183
  room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
  the structure and composition of Ti–Zr–N, Ti–Al–Zr–N and Ti–Al–V–N coatings, 481
Atom probe microanalysis
  atom probe microanalysis of the γ phase in cemented carbide materials, 283

Bending
  fracture toughness measurement by microindentation and three-point bend methods, 369
Boron
  friction and wear of ion-implanted TiB_2, 489
  influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117
  mechanical and tribological properties of chemically vapour-deposited boron carbon coatings, 453
  microstructure and wear of TiC–cubic BN tools, 429
  sintering behaviour and phase reactions of TiB_2 with ZrO_2 additives, 125
  strengthening and toughening of boride and carbide hard material composites, 97
Bulk moduli
  theory of bulk moduli of hard solids, 11

Carbon
  abrasive wear of some titanium-carbonitride-based cermets, 395
  a comparison of the strength of WC–Co measured by ring and transverse rupture strength specimens, 423
  adhesion at elevated temperatures of TiN coatings on cemented carbides, 513
  anomalous growth of the complex carbide phase in carbon-deficient WC–Co hard metal during the infiltration of eutectic liquid, 233
  applicability of the critical strain fracture criterion to WC–Co hard metals, 331
  atom probe microanalysis of the γ phase in cemented carbide materials, 283
  binder mean-free-path determination in cemented carbon by coercive force and material composition, 289
  cemented titanium carbonitrides: effects of temperature and carbon-to-nitrogen ratio, 265
  characterization of carbides by scanning tunneling microscopy, 55
  compressive deformation and fracture in WC materials, 299
  effects of microstructure on hardness and palmqvist fracture toughness of WC–Co alloys, 377
  elevated temperature properties of WC–Co cemented carbides, 363
  finite element modelling of crack propagation in WC–Co hard metals, 305
  growth of diamond on single crystals of tungsten carbide in microwave plasma, 535
  identification of optimum binder phase compositions for improved WC hard metals, 237
  influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117
  internal friction in WC–Co hard metals, 313
  kinetics of compositional modification of (W,Ti)C–WC–Co alloy surfaces, 225
  local impact damage and erosion mechanisms in WC–6wt.%Co alloys, 411
  mechanical and tribological properties of chemically vapour-deposited boron carbon coatings, 453
  mechanical properties, structure and performance of chemically vapor-deposited and physically vapor-deposited coated carbide tools, 443
  microstructural study of ion-implanted WC–Co, 503
  microstructure and wear of TiC–cubic BN tools, 429
  physics of transition metal carbides, 1
  pre-compression, internal stresses and coercivity in WC–Co, 337
  pressureless-sintered Al_2O_3–TiC composites, 183
  sintering of submicron WC–10wt.%Co hard metals containing nickel and iron, 249
  strengthening and toughening of boride and carbide hard material composites, 97
  the mechanical behaviour of cemented carbides at high temperatures, 343
  titanium-carbonitride-based hard alloys for cutting tools, 401
  vacancy arrangements in NbC_x, 29
  wear mechanisms modification induced by ion implantation in cemented tungsten carbide, 509

Carbonado
demineralization and microstructure of carbonado, 55
Ceramics
fracture behaviour of selected mixed-ceramic tool materials up to 1200 °C, 193
high toughness ceramics, 65
indentation fracture toughness and dynamic Young's modulus of ceramic biomaterials, 207
joining of silicon nitride ceramics to metals: the phase diagram base, 201
physicochemical aspects of the fracture rupture of ceramics under intensive mechanical and thermal loading, 91
room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
some fundamental aspects of the mechanical wear of hard ceramic crystals due to sliding, 143
Cermets
abrasive wear of some titanium-carbonitride-based cermets, 395
residual stress distribution in cermets, 275
Chemical vapour deposition
chemical vapour deposition coating of crystalline Si_3N_4 on a quartz crucible for nitrogen-doped Czochralski silicon crystal growth, 465
chemical vapor deposition for surface conditioning—opportunities and cautions, 435
characteristics of thin film growth in the synthesis of diamond by chemical vapour deposition and application of the thin film synthesis technology for tools, 525
mechanical and tribological properties of chemically vapour-deposited boron carbon coatings, 453
mechanical properties, structure and performance of chemically vapor-deposited and physically vapor-deposited coated carbide tools, 443
preparation of a diamond–corundum layer composite using low pressure diamond plasma-assisted chemical vapour deposition, 543
Chromium
the sintering characteristics and properties of hard metal with Ni–Cr binders, 269
Cobalt
a comparison of the strength of WC–Co measured by ring and transverse rupture strength specimens, 423
anomalous growth of the complex carbide phase in carbon-deficient WC–Co hard metal during the infiltration of eutectic liquid, 233
applicability of the critical strain fracture criterion to WC–Co hard metals, 331
effects of microstructure on hardness and palmqvist fracture toughness of WC–Co alloys, 377
elevated temperature properties of WC–Co cemented carbides, 363
finite element modelling of crack propagation in WC–Co hard metals, 305
internal friction in WC–Co hard metals, 313
kinetics of compositional modification of (W,Ti)C–WC–Co alloy surfaces, 225
local impact damage and erosion mechanisms in WC–6wt.%Co alloys, 411
microstructural study of ion-implanted WC–Co, 503
pre-compression, internal stresses and coercivity in WC–Co, 337
sintering of submicron WC–10wt.%Co hard metals containing nickel and iron, 249
Coercive force
binder mean-free-path determination in cemented carbon by coercive force and material composition, 289
Coercivity
pre-compression, internal stresses and coercivity in WC–Co, 337
Compacts
the microstructure of ultrahard material compacts studied by transmission electron microscopy, 549
Composites
influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117
preparation of a diamond–corundum layer composite using low pressure diamond plasma-assisted chemical vapour deposition, 543
pressureless-sintered Al_2O_3–TiC composites, 183
strengthening and toughening of boride and carbide hard material composites, 97
Compression
compressive deformation and fracture in WC materials, 299
pre-compression, internal stresses and coercivity in WC–Co, 337
the failure of hard materials in cyclic compression: theory, experiments and applications, 329
Corundum
preparation of a diamond–corundum layer composite using low pressure diamond plasma-assisted chemical vapour deposition, 543
Crack growth
subcritical crack growth and plastic deformation in the fracture of hard metals, 353
Crack propagation
finite element modelling of crack propagation in WC–Co hard metals, 305
Crystals
some fundamental aspects of the mechanical wear of hard ceramic crystals due to sliding, 143
Czochralski growth
chemical vapour deposition coating of crystalline Si_3N_4 on a quartz crucible for nitrogen-doped Czochralski silicon crystal growth, 465

Damage
local impact damage and erosion mechanisms in WC–6wt.%Co alloys, 411
Deformation
compressive deformation and fracture in WC materials, 299
dislocation microstructures in explosively deformed hard materials, 293
subcritical crack growth and plastic deformation in the fracture of hard metals, 353
Demineralization
demineralization and microstructure of carbonado, 55
Diamond
characteristics of thin film growth in the synthesis of diamond by chemical vapour deposition and application of the thin film synthesis technology for tools, 525

growth of diamond on single crystals of tungsten carbide in microwave plasma, 535
preparation of a diamond–corundum layer composite using low pressure diamond plasma-assisted chemical vapour deposition, 543
synthesis of sintered diamond with a high electrical resistivity and high hardness, 517
the dynamometer as a qualitative gauge in diamond polishing, 565
Diffusion
self-diffusion of silicon-30 and nitrogen-15 in α phase silicon nitride, 47
Dislocations
dislocation microstructures in explosively deformed hard materials, 293
Dynamometer
the dynamometer as a qualitative gauge in diamond polishing, 565

Erosion
hardness and fracture toughness of semiconducting materials studied by indentation and erosion techniques, 131
local impact damage and erosion mechanisms in WC–6wt.%Co alloys, 411
recent observations of the erosion of hard materials, 389

Finite element modelling
finite element modelling of crack propagation in WC–Co hard metals, 305
Fracture
applicability of the critical strain fracture criterion to WC–Co hard metals, 331
compressive deformation and fracture in WC materials, 299
effects of microstructure on hardness and palmqvist fracture toughness of WC–Co alloys, 377
effects of residual stresses in fracture toughness testing of hard metals, 383
fracture behaviour of selected mixed-ceramic tool materials up to 1200 °C, 193
fracture toughness measurement by microindentation and three-point bend methods, 369
hardness and fracture toughness of semiconducting materials studied by indentation and erosion techniques, 131
indentation fracture toughness and dynamic Young's modulus of ceramic biomaterials, 207
physicochemical aspects of the fracture rupture of ceramics under intensive mechanical and thermal loading, 91
subcritical crack growth and plastic deformation in the fracture of hard metals, 353
Friction
friction and wear of ion-implanted TiB_2, 489
internal friction in WC–Co hard metals, 313

Hard metals
anomalous growth of the complex carbide phase in carbon-deficient WC–Co hard metal during the infiltration of eutectic liquid, 233
applicability of the critical strain fracture criterion to WC–Co hard metals, 331
effects of residual stresses in fracture toughness testing of hard metals, 383
finite element modelling of crack propagation in WC–Co hard metals, 305
identification of optimum binder phase compositions for improved WC hard metals, 237
internal friction in WC–Co hard metals, 313
sintering of submicron WC–10wt.%Co hard metals containing nickel and iron, 249
subcritical crack growth and plastic deformation in the fracture of hard metals, 353
the sintering characteristics and properties of hard metal with Ni–Cr binders, 269
Hardness
hardness and fracture toughness of semiconducting materials studied by indentation and erosion techniques, 131
hardness anisotropies: a new approach, 19
Hot isostatic pressing
the effect of temperature and yttria content on the properties of hot isostatically pressed Si_3N_4, 169

Indentation
fracture toughness measurement by microindentation and three-point bend methods, 369
hardness and fracture toughness of semiconducting materials studied by indentation and erosion techniques, 131
indentation fracture toughness and dynamic Young's modulus of ceramic biomaterials, 207
Ion implantation
friction and wear of ion-implanted TiB_2, 489
microstructural study of ion-implanted WC–Co, 503
wear mechanisms modification induced by ion implantation in cemented tungsten carbide, 509
Ion plating
hard transition metal nitride films deposited by triode ion plating, 497
Iron
sintering of submicron WC–10wt.%Co hard metals containing nickel and iron, 249

Kinetics
kinetics of compositional modification of (W,Ti)C–WC–Co alloy surfaces, 225
kinetics of liquid phase sintering, 215

Magnesium
resistance curve behavior of supertough MgO-partially-stabilized ZrO_2, 83
Mechanical behaviour
the mechanical behaviour of cemented carbides at high temperatures, 343
Mechanical loading
physicochemical aspects of the fracture rupture of ceramics under intensive mechanical and thermal loading, 91
Mechanical properties
influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117

mechanical and tribological properties of chemically vapour-deposited boron carbon coatings, 453
mechanical properties and wear resistance of a whisker-reinforced zirconia-toughened alumina, 105
mechanical properties, structure and performance of chemically vapor-deposited and physically vapor-deposited coated carbide tools, 443
Microparticles
size separation for hard microparticles, 571
Microstructure
demineralization and microstructure of carbonado, 55
dislocation microstructures in explosively deformed hard materials, 293
effects of microstructure on hardness and palmqvist fracture toughness of WC–Co alloys, 377
microstructural study of ion-implanted WC–Co, 503
microstructure and wear of TiC–cubic BN tools, 429
room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
the microstructure of ultrahard material compacts studied by transmission electron microscopy, 549
investigations of phase equilibria in the Ti–N and Ti–Mo–N systems, 257

Neodymium
mixed α- and β-(Si–Al–O–N) materials with yttria and neodymia additions, 161
Nickel
sintering of submicron WC–10wt.%Co hard metals containing nickel and iron, 249
the sintering characteristics and properties of hard metal with Ni–Cr binders, 269
Niobium
vacancy arrangements in NbC_x, 29
Nitrogen
abrasive wear of some titanium-carbonitride-based cermets, 395
adhesion at elevated temperatures of TiN coatings on cemented carbides, 513
cemented titanium carbonitrides: effects of temperature and carbon-to-nitrogen ratio, 265
chemical vapour deposition coating of crystalline Si_3N_4 on a quartz crucible for nitrogen-doped Czochralski silicon crystal growth, 465
hard transition metal nitride films deposited by triode ion plating, 497
investigations of phase equilibria in the Ti–N and Ti–Mo–N systems, 257
joining of silicon nitride ceramics to metals: the phase diagram base, 201
microstructure and wear of TiC–cubic BN tools, 429
mixed α- and β-(Si–Al–O–N) materials with yttria and neodymia additions, 161
on the α-to-β phase transformation in silicon nitride, 151
room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
self-diffusion of silicon-30 and nitrogen-15 in α phase silicon nitride, 47
the effect of temperature and yttria content on the properties of hot isostatically pressed Si_3N_4, 169
the structure and composition of Ti–Zr–N, Ti–Al–Zr–N and Ti–Al–V–N coatings, 481
titanium-carbonitride-based hard alloys for cutting tools, 401

Oxygen
mechanical properties and wear resistance of a whisker-reinforced zirconia-toughened alumina, 105
mixed α- and β-(Si–Al–O–N) materials with yttria and neodymia additions, 161
pressureless-sintered Al_2O_3–TiC composites, 183
resistance curve behavior of supertough MgO-partially-stabilized ZrO_2, 83
room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
sintering behaviour and phase reactions of TiB_2 with ZrO_2 additives, 125

Phase reactions
sintering behaviour and phase reactions of TiB_2 with ZrO_2 additives, 125
Phase transformation
on the α-to-β phase transformation in silicon nitride, 151
Physical vapour deposition
mechanical properties, structure and performance of chemically vapor-deposited and physically vapor-deposited coated carbide tools, 443

Rupture
a comparison of the strength of WC–Co measured by ring and transverse rupture strength specimens, 423
physicochemical aspects of the fracture rupture of ceramics under intensive mechanical and thermal loading, 91

Scanning tunneling microscopy
characterization of carbides by scanning tunneling microscopy, 55
Semiconducting materials
hardness and fracture toughness of semiconducting materials studied by indentation and erosion techniques, 131
Silicon
chemical vapour deposition coating of crystalline Si_3N_4 on a quartz crucible for nitrogen-doped Czochralski silicon crystal growth, 465
joining of silicon nitride ceramics to metals: the phase diagram base, 201
mixed α- and β-(Si–Al–O–N) materials with yttria and neodymia additions, 161
on the α-to-β phase transformation in silicon nitride, 151
room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
self-diffusion of silicon-30 and nitrogen-15 in α phase silicon nitride, 47
the brittle-to-ductile transition in silicon, 39
the effect of temperature and yttria content on the properties of hot isostatically pressed Si_3N_4, 169
Single crystals
growth of diamond on single crystals of tungsten carbide in microwave plasma, 535

Sintering
kinetics of liquid phase sintering, 215
pressureless-sintered Al_2O_3–TiC composites, 183
sintering behaviour and phase reactions of TiB_2 with ZrO_2 additives, 125
sintering of submicron WC–10wt.%Co hard metals containing nickel and iron, 249
synthesis of sintered diamond with a high electrical resistivity and high hardness, 517
the sintering characteristics and properties of hard metals with Ni–Cr binders, 269
Strain
applicability of the critical strain fracture criterion to WC–Co hard metals, 331
Strengthening
strengthening and toughening of boride and carbide hard material composites, 97
Stress
effects of residual stresses in fracture toughness testing of hard metals, 383
pre-compression, internal stresses and coercivity in WC–Co, 337
residual stress distribution in cermets, 275
Structure
mechanical properties, structure and performance of chemically vapor-deposited and physically vapor-deposited coated carbide tools, 443
the structure and composition of Ti–Zr–N, Ti–Al–Zr–N and Ti–Al–V–N coatings, 481

Thermal loading
physicochemical aspects of the fracture rupture of ceramics under intensive mechanical and thermal loading, 91
Thin film growth
characteristics of thin film growth in the synthesis of diamond by chemical vapour deposition and application of the thin film synthesis technology for tools, 525
Titanium
abrasive wear of some titanium-carbonitride-based cermets, 395
adhesion at elevated temperatures of TiN coatings on cemented carbides, 513
cemented titanium carbonitrides: effects of temperature and carbon-to-nitrogen ratio, 265
friction and wear of ion-implanted TiB_2, 489
influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117
investigations of phase equilibria in the Ti–N and Ti–Mo–N systems, 257
kinetics of compositional modification of (W,Ti)C–WC–Co alloy surfaces, 225
microstructure and wear of TiC–cubic BN tools, 429
pressureless-sintered Al_2O_3–TiC composites, 183
sintering behaviour and phase reactions of TiB_2 with ZrO_2 additives, 125
the structure and composition of Ti–Zr–N, Ti–Al–Zr–N and Ti–Al–V–N coatings, 481
titanium-carbonitride-based hard alloys for cutting tools, 401
Toughening
microcrack and transformation toughening of zirconia-containing alumina, 77
strengthening and toughening of boride and carbide hard material composites, 97
Toughness
high toughness ceramics, 65
Transition metals
hard transition metal nitride films deposited by triode ion plating, 497
physics of transition metal carbides, 1
Transmission electron microscopy
the microstructure of ultrahard material compacts studied by transmission electron microscopy, 549
Tribochemical properties
influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117
Tribological properties
mechanical and tribological properties of chemically vapour-deposited boron carbon coatings, 453
Tungsten
a comparison of the strength of WC–Co measured by ring and transverse rupture strength specimens, 423
anomalous growth of the complex carbide phase in carbon-deficient WC–Co hard metal during the infiltration of eutectic liquid, 233
applicability of the critical strain fracture criterion to WC–Co hard metals, 331
compressive deformation and fracture in WC materials, 299
effects of microstructure on hardness and palmqvist fracture toughness of WC–Co alloys, 377
elevated temperature properties of WC–Co cemented carbides, 363
finite element modelling of crack propagation in WC–Co hard metals, 305
growth of diamond on single crystals of tungsten carbide in microwave plasma, 535
identification of optimum binder phase compositions for improved WC hard metals, 237
influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117
internal friction in WC–Co hard metals, 313
kinetics of compositional modification of (W,Ti)C–WC–Co alloy surfaces, 225
local impact damage and erosion mechanisms in WC–6wt.%Co alloys, 411
microstructural study of ion-implanted WC–Co, 503
pre-compression, internal stresses and coercivity in WC–Co, 337
sintering of submicron WC–10wt.%Co hard metals containing nickel and iron, 249
wear mechanisms modification induced by ion implantation in cemented tungsten carbide, 509

Vanadium
the structure and composition of Ti–Zr–N, Ti–Al–Zr–N and Ti–Al–V–N coatings, 481

Wear
abrasive wear of some titanium-carbonitride-based cermets, 395

friction and wear of ion-implanted TiB_2, 489
influence of mechanical and tribochemical properties on the wear behaviour of B_4C–TiB_2–W_2B_5 composites, 117
mechanical properties and wear resistance of a whisker-reinforced zirconia-toughened alumina, 105
microstructure and wear of TiC–cubic BN tools, 429
some fundamental aspects of the mechanical wear of hard ceramic crystals due to sliding, 143
wear mechanisms modification induced by ion implantation in cemented tungsten carbide, 509

Young's modulus
indentation fracture toughness and dynamic Young's modulus of ceramic biomaterials, 207
Yttrium
mixed α- and β-(Si–Al–O–N) materials with yttria and neodymia additions, 161
room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
the effect of temperature and yttria content on the properties of hot isostatically pressed Si_3N_4, 169

Zirconium
mechanical properties and wear resistance of a whisker-reinforced zirconia-toughened alumina, 105
microcrack and transformation toughening of zirconia-containing alumina, 77
resistance curve behavior of supertough MgO-partially-stabilized ZrO_2, 83
room temperature strength and microstructure of Si_3N_4–Y_2O_3–ZrO_2–Al_2O_3 ceramics, 175
sintering behaviour and phase reactions of TiB_2 with ZrO_2 additives, 125
the structure and composition of Ti–Zr–N, Ti–Al–Zr–N and Ti–Al–V–N coatings, 481
